

Absolute CBD Oils

Absolute CBD™ solely utilizes full plant extract from the industrial Hemp plant in the production of our products. All of our Absolute CBD™ products contain Cannabinoids found naturally within the plants genetics, as research supports Full Spectrum Plant Extracted CBD Oil remains most effective. Unlike most every other known similar topical products, our Absolute CBD™ topical products are also formulated utilizing Full Spectrum Plant Extracted Oil. Additionally, the Absolute CBD™ Products quality results from our proprietary extraction technology upon our specially breed extremely high level CBD & very low levels of THC cultivars. And in addition, our specialized screening removal of all wax & other impurities, as well as choosing to utilize the highest quality All Natural Extracted Industrial Hemp Seed Oil, avoiding other fillers and additives, resulting in one of the highest quality Full Spectrum Extracted Plant CBD Oils produced today.

Absolute CBD Topicals

Absolute CBD is extremely blessed to possess a joint venture manufacturing agreement for the exclusive formulation proprietary patented processing of our superior quality topical products. Our main product "Points of Difference" over most all other similar products are our high concentrations of all natural pain reliever anti-inflammatory properties within our products, our proprietary patented all natural incredibly absorbable delivery system (Cream & Gel), and utilizing a high quality full spectrum CBD Oil opposed to isolate based oils.

Absolute CBD Extraction:

- Employs the Super-Critical Extraction Process
- Deploys the (CO2) at a low temperature and high pressure (this becomes liquid and draws the cannabinoids and terpenes from the plant material)
- Reserves over 500 phytonutrients that exist in the plant (this process preserves a broad spectrum of valuable and beneficial molecules and phyto-nutrients that are often lost using other extraction methods)

From Zero to Hero?

With all the good CBD has to offer, unfortunately there is still a lot of confusion, misinformation and stigma out there. Fortunately with the scientific discovery of the ECS and all the research and clinical studies with findings growing in leaps and bounds, what was once seen as a "bad" natural illegal substance is finally being acknowledged for the plethora of benefits to both physical and mental health. CBD is finally being viewed as the natural medical alternative and the newest hero in the health and wellness industries.

There are numerous exciting clinical research studies providing supporting successful evidence CBD is effective upon various conditions. Strictly as a chemical substance, CBD has displayed strong antioxidant properties with current research illustrating CBD to be a benefit upon psychological ailments such as anxiety, stress and panic. In addition, there is also strong supporting evidence CBD contains anti-seizure properties and the ability to inhibit cancer growth.

Absolute CBD Changing Lives

Bob Leatherow- I suffered with neuropathy pain in my feet for almost ten years before discovering Absolute CBD Hemp Oil and CBD Pain Relief Cream. During attacks, I had to take prescription pills that only dulled the pain, and left me out of commission for days at a time. I have been taking Absolute CBD Hemp Oil and CBD Pain Relief Cream for five months, and in that time I have not had a single neuropathy attack! These products have eliminated the pain that used to cripple me for days at a time, and have truly changed my life!

Brian B.- Tampa, FL "Just wanted to let you guys know that you have an amazing product. I have had 4 surgeries in both knees and I still experienced pain due to my rheumatoid arthritis. I used to take aleve 4 times a day and still had pain walking and even standing. After using the CBD cream the first day, I immediately felt relief and the pain went away! I am more active and I only use the cream once or maybe twice a day. This has made an incredible impact in my life and I have been telling my friends about it. Thank you from the bottom of my heart."

Stephanie M.- Largo, FL "I purchased the 2000mg Sublingual Oil and I just love this product. After years of taking Adderall for ADHD, I started taking CBD Oil and it has helped me immensely. For me it works the same or better without the horrible side-effects I used to have. The reason I went with CBD was because my doctor told me that the Adderall was taking a toll on my heart. I am so glad I found out about CBD."

Niko Morales- Seminole, FL "I have a 8 year old Maltese that had started acting strange. Since he looked to be in distress and was coughing and hacking, I took him to the emergency vet. After several tests and \$300 later, I was told that he has anxiety issues and prescribed me a narcotic for my dog. After doing much research on my own, I preferred to go natural as he is getting older and I came upon your website. I ordered the CBD oil and started giving it to him. He is a completely different dog. He is more calm and I can leave him alone when I go to work and he is fine when I get home. I also noticed that he is more active and healthier."

Amy F.- Orlando, FL I've been using "Absolute CBD" Full Spectrum Hemp CBD Oil for over a year now. It is the very first CBD oil that I ever used and it's provided me with amazing pain relief. A few months ago, I experimented with a different very popular full-spectrum CBD oil that was highly recommended but it just didn't do the trick. I know that many people new to CBD are confused by all the products out there and they waste a lot of time and money trying to find what works for them. That's why I feel very fortunate to have been introduced to "Absolute CBD" and I see no reason to ever try any other brand. I've recommended "Absolute CBD" to several very grateful friends and neighbors.

This is a frequently asked question. Cannabidiol (CBD) is a natural substance that has emerged into the spotlight for several reasons. CBD is one of over 500 compounds, and among a class of at least 113 molecules called Cannabinoids found within Cannabis Plant (Marijuana and Industrial Hemp).

Of these compounds, CBD and THC are usually present in the highest concentrations, and are therefore the most recognized and studied.

We understand that there are some confusing terms related to Cannabidiol, so we wanted to take the time to explain. Below are some of the most important Cannabidiol related terms to understand.

- **Cannabis** – A type of tall flowering plant that includes three distinct variations: Cannabis Ruderalis, Cannabis Indica, and Cannabis Sativa. Cannabis has a wide range of industrial and medical applications and has been used since ancient times for its sturdy fiber, oils, and medicinal purposes. The different plant variations containing high THC concentrations, being cultivated & utilized as a recreational drug, remain strictly regulated.
- **Industrial Hemp** – Industrial Hemp refers to the increasing varieties of Cannabis that are grown specifically to be utilized for seeds, oils, and fibers. Industrial Hemp is also grown, processed & refined into numerous products including wax, resin, cloth, pulp, paper, rope, fuel, and hemp oil.
- **Cannabinoids** – A very diverse chemical family including plant, animal & artificially derived compounds. Different Cannabinoids possess widely varied effects, with some Cannabinoids proven to possess soothing & relaxing properties, while others are classified as illegal drugs.
- **CBD** – Cannabidiol (CBD) is a naturally occurring Cannabinoid, and the second most abundant constituent of the Cannabis plant. CBD is safe to consume and is legal in all 50 states and 40 countries.
- **THC** – Tetrahydrocannabinol (THC) is the most abundant constituent of the Cannabis plant and a strongly Psychoactive Cannabinoid. THC is responsible for the “high” obtained from smoking Marijuana, thus its production and usage is strictly regulated.
- **Psychoactive** – Any chemical substance entering the brain and directly affecting the Central Nervous System is considered Psychoactive. Many Psychoactive substances have medical applications (i.e., Anesthetics, Psychiatric drugs, etc.), yet some of these substances are used solely for recreation, resulting in dangerous side effects and addiction.
- **Intoxicating** – Any substance causing one to alter their behavior, or causing one to lose control of one’s faculties. Almost all illegal drugs have Intoxicating properties, although worldwide most Intoxication cases are attributed to alcohol. Intoxication can be caused by substances that directly affect the brain (i.e., Psychoactive) or by indirectly causing damage to your organs (i.e., through Toxicity, hence the term).

The ECS is perhaps our body's most important Physiologic system involved in a variety of processes including Appetite, Immune System functions, Inflammation, Memory, Mood, Nausea, Pain Management & Sleep. The ECS exists in all humans and many animals, and is active from before birth until the end of life.

Researchers have discovered two main Endocannabinoid Receptors, Cannabinoid 1 (CB1) and Cannabinoid 2 (CB2), both receptive to Endocannabinoids (naturally produced within our bodies) and Phytocannabinoids (plant-based). CB1 Receptors are primarily found in the Central Nervous System – mostly affecting the brain and CB2 Receptors are primarily found within the Immune, Gastrointestinal (GI) and Peripheral Nervous Systems.

The intensity of pain is reduced when THC is present in the CB1 Receptor sites. For this reason, THC medications are so prized by people with intense pain issues. Additionally, CB1 Receptors are not present in the part of the brain that regulates heart rate & respiration, so unlike narcotics, there is no lethal dose threshold for THC, allowing one to consume as much as needed for its palliative effects.

CBD Receptors are keyed to CBD and influences many of our body's systems. In the immune System CBD acts as an Anti-Inflammatory agent to boost the Immune System's functions. In the GI system, CBD has Anti-Spasmodic properties and in the Peripheral Nervous System, CBD is noted for its calming & relaxation effects.

Armed with the known impact of how CBD interacts with the ECS, as well as the results of recently completed & preliminary indications of current ongoing CBD clinical research trials, it remains extremely likely CBD shall provide substantial medical benefit upon numerous conditions.

CBD oil is extracted from the Industrial Hemp plants grown specially to contain high concentrations of Cannabidiol (CBD). Industrial Hemp belongs to the plant species named 'cannabis'.

There are many varieties and several categories of Cannabis plants. The two most popular categories are the Non-Psychoactive plant (Industrial Hemp) and the Psychoactive plant (Cannabis or Marijuana). Industrial hemp is considered unsuitable for recreational use as it will not produce the euphoria or “high” feeling when consumed.

This is a very common question due to the misinformation surrounding CBD's chemical properties that closely resemble THC's properties.

H.R. 525 - Industrial Farming Act of 2015 defines Industrial Hemp as "the 15 plant Cannabis Sativa L and any part of such plant, whether growing or not, with a delta-9 Tetrahydrocannabinol (THC) concentration of not more than 0.3 percent (0.3% or less THC) on a dry weight basis."

Absolute CBD™ products are ISO Independently Tested & Certified assuring the intended concentrations (Milligrams) of CBD & (Percentage) of THC, are meeting the required legal guidelines of 0.3% or less THC.

If you live in the US, this means you don't need a prescription and can legally purchase and consume Industrial Hemp CBD in any state. Unfortunately, outside of the United States the legal status is challenging. Since regulations vary from country to country, we recommend you research out your country's legality on CBD made from Industrial Hemp.

CBD

- Antibacterial
- Inhibits cancer cell growth
- Neuro-protective
- Promotes bone growth
- Reduces seizures and convulsions
- Reduces blood sugar levels
- Reduces function in the immune system
- Reduces inflammation
- Reduces risk of artery blockage
- Reduces small intestine contractions
- Reduces vomiting and nausea
- Relieves pain
- Relieves anxiety
- Slows bacterial growth
- Suppresses muscle spasms
- Tranquilizing
- Treats psoriasis
- Vasorelaxant

CBDA

- Reduces inflammation
- Inhibits cancer cell growth

CBG

- Aids sleep
- Inhibits cancer cell growth
- Promotes bone growth

CBGA

- Reduces inflammation
- Relieves pain

CBC

- Inhibits cancer cell growth
- Promotes bone growth
- Reduces inflammation
- Relieves pain

CBCA

- Reduces inflammation
- Treats fungal infection

A9-THCA

- Aids sleep
- Inhibits cancer cell growth
- Suppresses muscle spasms

A9-THC

- Reduces vomiting and nausea
- Relieves pain
- Stimulates appetite
- Suppresses muscle spasms

AB-THC

- Relieves pain

THCA

- Reduces convulsions and seizures
- Promotes bone growth
